INTRODUCTION

Teaching is a fundamental purpose of the University of Florida and the dissemination of new knowledge in our classrooms, studios, and clinics enables our students and trainees to fully explore their intellectual boundaries. Assessment and evaluation of our courses are designed to enhance instruction and maximize learning to meet the mission of the university. This report contains the results gathered through the GatorEvals system. Students were invited to share their feedback on the teaching and course material. We invite every faculty member to examine the analysis in the report and utilize the resources provided in the report. Thank you for your continued great work!

Chris Hass, Ph.D.
Associate Provost for Academic and Faculty Affairs

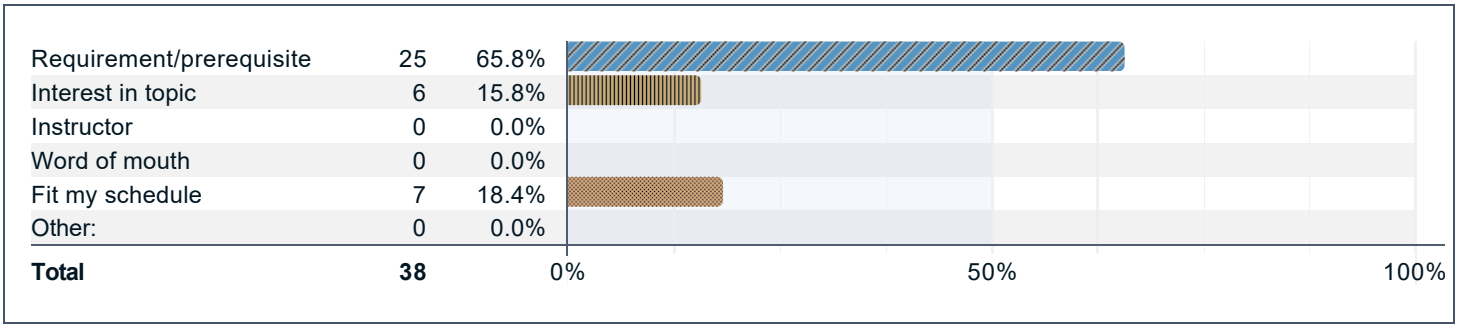

Resources to help you with this report:

1. Consult our GatorEvals Guide for interpreting and using teaching survey results.
2. Register for Elevate, a new Center for Teaching Excellence (CTE) initiative to help you create a customized trajectory for professional development, focusing on growth in areas you have identified through self-reflection.
3. GatorEvals offers the ability to opt-in to a midterm evaluation. This formative feedback offers you a chance to address student insights and adjust the course before the term concludes. Reports are only available to you and are not considered part of the T&P process.
4. Register and attend a CTE workshop.
5. Schedule a consultation with a CTE staff member or your internal unit to help you interpret your results and develop a course of action.
6. Visit the CTE Teaching Strategies by Question GatorEvals page for additional resources.

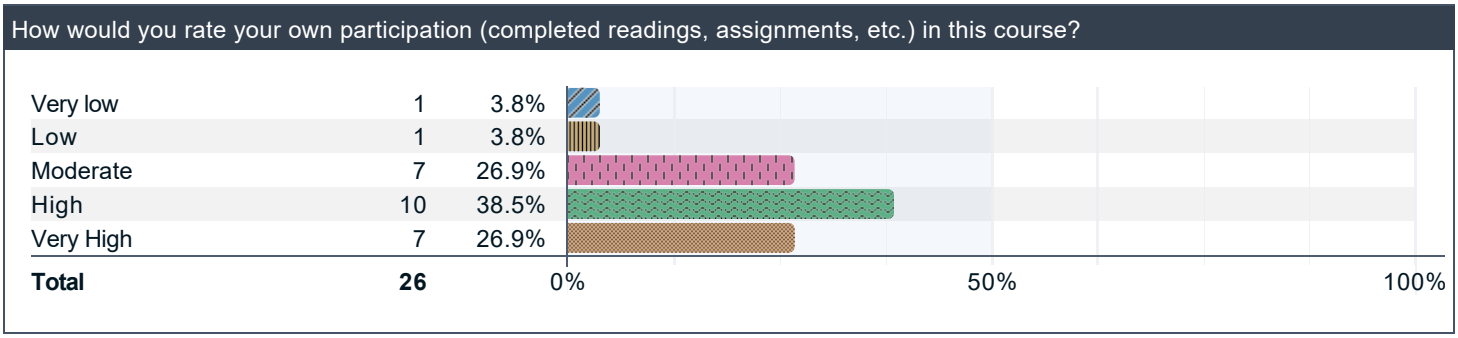

Creation Date: **Monday, May 4, 2026**

Student Self-Evaluation Questions

Why did you take this course?

How would you rate your own participation (completed readings, assignments, etc.) in this course?

How would you rate your own participation (completed readings, assignments, etc.) in this course?

Response Count	Response Rate	Mean	IM	DPT Mean	DPT IM	College Mean	College IM

Comment
passionate. made class expectations very clear
She provided good practice problems and exams to be able to become familiar with the course content.
Professor Zhang is very committed to her subject. She provided and went over useful PowerPoint slides and example problem worksheets for each chapter, making learning the content easy. This also made catching up on material after missing a class extremely simple. The assignment volume and content were appropriate for the course, and the exams were very reasonable. She also provided practice exams which I appreciated and graded exams in a timely manner. She provided ample office hours and had a good attendance policy. She was very kind and understanding and I feel I learned a lot in her course. I would definitely recommend taking this course with Professor Zhang.
Explains concepts very well
Great course learned a lot
Made it very easy and comfortable learning environment
The practice problems in class were very helpful! I felt prepared enough for the exams by studying the practice problems in class and the online homework.
The professor displayed true enthusiasm when explaining the material. She offered numerous resources for better understanding the various modules and also gave out handouts that would be helpful for studying before the exams.
Provided practice problems that were essentially what was on the exam.
Knowledgeable and approachable
She was very helpful with answering questions and seemed like she cared alot about the students and what she was teaching
The instructor was incredibly passionate about teaching the course. Every lecture all material that was needed was covered well ahead of when it was tested. Tests were extremely fair and the questions asked on exams were very closely tied to the practice and materials released to us.
She was very passionate!
She is very positive and willing to help us whenever we have questions, which is very nice to know. Additionally, she’s very prompt at answering emails.
Enthusiasm
Professor Zhang is very knowledge about about the material and provides many resources for learning. She was also an understanding and generous grader.
Professor Zhang is an efficient instructor. She sets very clear expectations for the class and helps students whenever possible.
She responded to emails super fast which I appreciated a lot. She also had very useful course material such as lecture slides and worksheets that were relevant to content and the exams.
The instructor is very knowledgeable on the content she teaches and it shows. She is also very willing to help students who have any questions.
The instructor was able to explain certain core concepts when asked. They demonstrated an adequate level of understanding of the course content.
Answered questions and asked if help was needed.
Can tell she likes the subject, she is super nice, good vibes, and understanding. Love the worksheets – they help the most when it comes to practicing the topic.

What additional constructive feedback can you offer the instructor that might help improve the course?

Comment
provide better practice tests
n/a
She may have went through content a little quickly at some points, hence why we got through all the content a little early. I didn't mind it at all because I liked taking the material she provided us and learning on my own. However, I imagine some students may have missed some material.
Some math was hard to follow
N/A
More groupwork
The classes were often were very quick and sometimes the topics were not discussed in depth. When doing practice problems in class, the solutions also skipped steps often, and it was hard to follow.
Make her own slides instead of using the ones from the textbook. She would just read directly off of them.
nothing!
Her handwriting is very bad and sometimes it is hard to follow her on the board. Like she gives us time to solve problems in class but it ends up just beign students waiting for her to answer the question
I know it's not her fault but her English skills weren't that great which made the class more difficult to understand.
Maybe having other assignments to help with grade boosting because of how heavy exams weigh on the grade.
Nothing I can think of
The lecture portion was sometimes difficult to understand.
Professor Zhang can improve the course by assigning groups for the group homework. As someone who does not know many people in the class, I struggled to form a group.
Sometimes I felt like the material was covered very quickly, specifically the practice problems. I think I would have understood better if we had gone a little bit slower.
The lecture slides were a bit disorganized at times and easy to get lost on. Perhaps they could be more well–structured to highlight what is the most important and be more aligned to the homeworks.
Make lectures more clear.
She just reads off the powerpoint and just tells us the information. She doesn't explain the content. For practice problems, she has us do them ourselves and then she just rights the answer of how she solved it, but she never explains it all out.

What constructive suggestion(s) do you have for improving the course materials, organization, and assignments?

Comment
sometimes the homework questions did not really cover information from class well
n/a
N/A
N/A
N/A
Not pearson because it is $100+ for students just to do online homework
Be more engaging with the materials. Not many people show up to class because theres no reason to. The instructor does not teach the material, she just reads off the slides. I understand the material more by just reviewing the answer key to the practice problems.
Spread out content a little but more
nothing I like the course format
None Regarding the course! I loved the worksheets we did in class, they were extremely helpful to practice the concept immediately after we learnt it.
n/a
I think the Pearson homework is much more difficult compared to what we actually learn in the class and sometimes we haven't really touched on the type of questions it asks us to do, so maybe considering how difficult the questions are before assigning each one would be helpful or allowing for more than two attempts on each question.
More attempts on the Pearson homework
I appreciate the practice exams and posting the answers to the in–class assignments for us to review. More practice for the exam conceptual questions would be nice.
I do not have any suggestions. The course structure is set up to favor students who come to class and read the textbook, which I expect.
NA
The course required purchasing a textbook to complete the homework content, which puts an undue burden on students who are unable to purchase the book. Access to the textbook also is revoked by the publisher after the course ends, making it useless if students want to refer back to it. Please use a textbook for which students have the option to purchase or borrow a physical copy without the need to pay for a subscription. This will help students learn and review the course material in the future if they desire, instead of having to purchase the book again after the class ends.
Make in class quizzes actually show up on course grade.

Please identify the topics and/or skills you learned in the course that you believe will have the highest application for future courses or professional growth.

Comment
problem solving. critical thinking
I think that the course helps you to understand the importance of marginal cost analysis and how to implement that into a business or life settings.
Problem solving and critical thinking in an economics context. I learned a lot more about demand curves, marginal revenue, marginal cost, and profit functions. Learning how to alter processes and equations to maximize profit depending on the kind of market was very interesting. I also found the chapter on game theory and how different firms compete with each other very interesting.
N/A
N/A
Utility
Present and future value are very interesting topics because they can be useful when opening savings accounts or loans/mortgage.
Microeconomics is highly applicable.
supply and demand and applications
business decisions under uncertainty
Game Theory, and the mechanics of oligopolies. These two fields alongside the standard economic framework for decision making and utility maximization.
Honestly I don't think what we learnt was "Managerial Economics"
Understanding how the market works in different scenarios and when I’m maximizing my profits.
Economics
I got a very good foundation of basic economic concepts such as duopolies and game theory that I was previously lacking, which will be very helpful in future economics classes.
I will definitely implement the managerial applications of the topics and skills we learned in this course. While I am not going into the business field, I will most likely be put in a management position and will need to apply money management skills.
Analytical thinking and application to problems
I learned how to apply mathematics to the theory of microeconomics from a manager's perspective.
None
